Re: Coquitlec Electronic Rustproofing Systems

To Whom It May Concern:

Mac's Engineering has been using Coquitlec Electronic Rustproofing Systems on 2007/08 Ford Explorers, Mazda CX9 and Mercury Mariner since the year 2000.

With now approximately 1,500 vehicles fitted with Coquitlec Systems, they are proving to be the best Rust Proofing System for the Canadian climate in the highly corrosive environment.

The warranty comments "Don't why supply these vehicles for 3MA times as the driving force behind the success is the Coquitlec Electronic Rustproofing System."

A quote from the MD Mfr from One Vehicle Leasing sums it up:

"These vehicles fitted with a Coquitlec System are coming up a lot of money, we have had no rust issues at all, and the fact that we have had no vehicles returned with rust has been a major factor in the highly optimal environment of leasing these vehicles."

Mac's built mining vehicles are a quality built vehicle and Coquitlec Electronic Rustproofing Systems are ensuring they stay that way.

Yours Faithfully,

Mac's Fabrication

CoupleTec Electronic Rust Proofing

Dear Gary,

I would like to take today to thank you for your help and advice on rust protection for our civil club.

Last on five years ago, we fitted our new Yamaha Rhino ATV with a CoupleTec Electronic Rust Proofing System, and I am pleased to say that after five years of hard use, the vehicle is still looking fantastic, the only thing that has been used since the time has been a wash on occasion of WD40.

For an organisation like ours that wears the money give directly to our core business, lifesaving and not on maintenance, your system has been extremely beneficial.

We have also fitted your system to our Yamaha Grizzly 660 and Kawasaki Brute Force 750 and after the vehicle. The vehicles are not specifically spends many hours out in the salty air on the beach and have been extremely successful.

Having had such success we are now in the process of having CoupleTec devices fitted to our other club vehicles, a new Yamaha Rhino ATV, Toyota Commuter Bus and Hilux 4wd.

We are also in the process of having our Commodore Ambulance from Port Protection for anyone interested in extending the life of their vehicle to any recommendation.

Kind Regards

Brad Wells

CoupleTec Electronic Rustproofing.

To Whom It May Concern:

Mac's Engineering is one of Australia's largest body building companies that supplies purpose built trucks, bodies and accessories to the Mining Industry.

Mac's company policy is to supply and use only the very best automotive products and materials is why CoupleTec Electronic Rustproofing Systems are still the preferred Rustproofing method by the over-mining industry.

To date there are over 750 of these mining vehicles that have had CoupleTec fitted, and not one warranty claim, with CoupleTec Electronic Rustproofing Systems supplied by CoupleTec.

The new latest Computerised Electronic Rustproofing Systems from CoupleTec are the best we have seen, and are extremely confident that premium models and the added features these systems now have is certainly an added bonus.

Dear Sir/ Mam/ It May Concern

Electronic Rust Protection

Our beach patrol vehicles are subjected to a very harsh working environment, extensive exposure to salt water and sand, and are required to be reliable and safe to use. Our vehicles and office accessories are subjected to constant maintenance methods such are very successful.

We fitted CoupleTec electronic rust protection units to the vehicles and recommend the vehicles for extensive. This results were very good. A substantial improvement was noted in corrosion control. What a bonus! Our vehicles of the 2008 model year have been fitted with the latest CoupleTec units and we have no reckoning of the rust for the next five years.

Other systems have been tested but have not been as successful as the CoupleTec systems. The CoupleTec systems are easy to install and maintain and are reliable. We will be using the CoupleTec systems on our vehicles in the future and have no hesitation in recommending them to others.

Overall, it has proven to be a worthwhile addition to our vehicles and has prompted us to fit CoupleTec units to our other vehicles in the near future.

Gary Bell has always provided good honest advice, excellent service and fantastic delivery times on components, ensuring that these units are functioning correctly at all times.

Yours faithfully,

Burleigh Heads QLD 420

Dear Garry,

The Workmat Beach Surf Life Saving Club has had CoupleTec installed on our last two vehicles. The vehicles are a 2005 Ford Ranger and a 2005 Mitsubishi Triton. The Workmat Beach, on Phillip Island, is one of the most corrosive environments in Australia. We receive large south westerly swells and strong sub-tidals winds. Boating conditions are also extremely harsh on the beach vehicles.

Previously to CoupleTec being installed, our four wheel drive vehicles would suffer corrosion within the first year. We have had CoupleTec installed on our vehicles for approximately two years and have it in kilometres. We have had the roads value of the vehicle rust extremely low due to the rust damage. Since installing CoupleTec our vehicles have remained rust free and look great.

With CoupleTec installed on our 4WD we can be confident that we will have no problems with rust. There is minimum maintenance that still we need to do to simply have down the vehicle after the weekend. The system uses 4WD, a Ford Courier, was not fitted with the system. We have had to replace the whole rear tray due to rust. We will be fitting the body with a new system and should last a further 5 years.

We totally support CoupleTec and endorse it at the premier product on the market. There is no need to fit North Shore to the vehicle as the CoupleTec systems are very effective. We are totally satisfied that CoupleTec will protect expensive equipment in the harshest environments.

We look forward to totally installing CoupleTec on our 4WD and Quad Bikes (ATV) in the future.

Yours truly,

Chris Stevens
Mobile Equipment Officer

Dear Garry & Michael

Surf Life Saving Queensland Rust Protection

The South Coast Branch Surf Life Saving Queensland has this month made the 2006 model 4x4 utility, which will be fitted with a new CoupleTec electronic rust inhibitor.

The Association would like to thank you for the introduction to the device to our vehicle.

We have found over the age of our vehicles at the time of change over. The purchasing dealer was amazed on the condition of the paint work and chassis, to the rest the wheels of our vehicle. The CoupleTec system has been a major contributor to the vehicle's condition and we look forward to the future.

This electronic device has been refitted to our Nissan patrol 4x4 diesel utility for another 5 years. We will be using the device on the vehicle for the next two years before selling it.

Once again this year and your company for the introduction to CoupleTec.

Yours sincerely,

Barrie Crabbe
President South Coast Branch Life Saving

Tim Ranger
Courtenaurt Electronic Rust Protection

On behalf of Stanley Surf Lifesaving Club I would like to congratulate you on the excellent installation of the CoupleTec Rust Protection.

Our 5 years now we have had one of the R.O.S.E. Systems on our 4 Wheel Drive Trip vehicle. For our 2nd Nissan built here in Korea NZ4W with HD rigid all commercial specification and CoupleTec Rust Protection. The vehicle is ideal for the purpose.

With the family owned more this vehicle experiences being gripped by the salt water and sand. Our vehicle is also used for transporting our surf boats. The maintenance bills have been cut considerably by us having the R.O.S.E installed. Our vehicle is looking as good as the day it was purchased. We have found it an economical and cleaned system for the public for our needed funds. With this being an one-off-a-kind items of our funds towards our rescue and surf club equipment.

We would like to thank you for the introduction and for the simplicity and performance.

Dear Garry

Thank you for your recent order.

Please find enclosed:

1 x CoupleTec Electronic Rust Protection

Please note the following:

Rust Protection

Approximately four years ago we were approached by CoupleTec to trial a system that claimed to electronically inhibit rust and prevent the vehicle from rusting over its extensive working life. We were very sceptical as to the claims made by the manufacturer.

There was another brand of rust inhibitor which was then fitted at approximately the same time as the CoupleTec system.

The vehicles were subjected to some of the toughest conditions. These vehicles work in extreme conditions, constant exposure to salt water, sand, mud, and any part of the vehicles' mechanical components are subjected to rust.

Approximately 18 months later, the vehicle fitted with the other brand of rust inhibitor was removed from the vehicle. The vehicle was sent to Shell and McDonald's Systems was showing signs of rust and corrosion in the areas that were not protected.

At the point of Shell and McDonald's Systems of corrosion in appearance, the vehicle fitted with the CoupleTec system, required minor rust repair, and the other vehicle required extensive rust repair work.

The vehicles were then sold to Shell and McDonald's systems. These vehicles were also examined through their service life and required minor rust repair on part of each.

The vehicle fitted with the CoupleTec system required no rust repair work. The vehicle still looked excellent, there was no rust to be seen, and the vehicle was in all respects in excellent condition.

Dear Gary,

RE: CONSTRUCTION RUST PROOFING

Sutherland Shire Council has had CoupleTec Rust Proofing Systems on 2 of our Ford Rangers for approximately 3 years.

You can see these Rangers in years on our beaches in the wonderful job these systems did in protecting our vehicles from the harsh salt environment.

Our vehicles provide an average of 4 days per week to our construction crews, so we need the Ute and Ranger to be reliable and we can't afford to spend time rusting rectifications.

Sutherland Shire Council has a large fleet of vehicles and we have recently had a very close look at the CoupleTec Systems and have decided to have them installed on our new vehicles as they arrive.

We have just handed over Land Rover Discovery 4 to our Rangers and have had the CoupleTec System installed and will have the same for all our other vehicles.

We would also like to thank you for introducing your systems to our Crane guards and look forward to installing your systems on our Crane guards.

Thanks CoupleTec for a great rust proofing device.

Yours faithfully,

Ian Cuffe
